- Version Control (Git)

Education

Certificate in Full-Stack Web Development | CareerFoundry
August 4, 2024

University of Pittsburgh
August 2014 - May 2017

Web Development Projects

MyChatApp

- Designed a mobile app using React Native capable of sending messages.
- Created a database using Google Firestore to store and retrieve all the messages sent.
- Implemented a cache that will store messages, so they can be viewed even when offline.
- Incorporated advanced chat functions, such as sending images and location sharing.

[Github Repository](#) [Project Overview](#)

MyFlix App

- Created a non-relational database using MongoDB to store data on users and movies.
- Formed a REST API using Node.js, tested the endpoints with Postman, and deployed the finished API to heroku.
- Designed two frontend applications to use the API. One using React, and the other using Angular.
- Introduced user authentication, the ability to view a variety of movie data, as well as select favorites and view a personal profile page.

Meet App

- Built a progressive web application using React that uses the Google calendar API to display upcoming events.
- Incorporated AWS Lambda for serverless functions such as user authentication using OAuth.
- Customized the app layout using Recharts for better data visualization.
